

6th International Conference On Public Mental Health And Neurosciences (ICPMN – 2019)

December 26-27, 2019

Bengaluru, India.

THEME:

Mind-Body-Consciousness Linkage, Yogic & Neuro-Bioinformatics Research – Ancient to Modern.

Big data is a promising research area, still in its formative years with the initiation of new high information and cost reducing data capturing tools. With the increasing use of advanced technology and the exploding amount of data in bioinformatics, it is imperative to introduce effective and efficient methods to handle big data using the distributed and parallel computing technologies. Big data research finds huge application in Neuroscience and Brain research. Brain research is an extremely complex field of study which constitutes of Brain Anatomy, Neuroscience, Cognitive Science, Psychology and interrelated disciplines. The conference seeks collaboration within brain research, cross-disciplinary researcher mobility, and emerging trends and themes in brain research. Experts from around the world are invited to communicate the developments in neuroscience research. Yogic Science is an emerging alternative system under AYUSH system of medicine (i.e., Indigenous Health systems in Ayurveda, Yoga, Unani, Siddha & Homeopathy). Yoga is a mind and body practice with historical origins in ancient Indian philosophy but only recently has there been a move to substantiate these claims through scientific research. In a world that demands substantive applied research evidence to support different approaches to health care and explorations in yoga psychology, yoga is gaining attention.

Call for research/review/case studies abstracts from psychology, computer science, health sciences, bioinformatics, yogic science, philosophy and neuroscience.

Topics of the session may include, but not limited to, the following:

- Big data analysis in Bioinformatics
- Bioconductor and Bioinformatics applied for understanding Neurodegenerative diseases
